# Adding Zookeeper Nodes

### Add Zookeeper nodes 1/5

#### 1. Add new Zookeeper nodes to response file

Update response file by adding the new Zookeeper nodes. Remember to keep an odd number of voters. On the example below, 5 voters are used. IP16 is tagged as observed.

#### Original response file:

```
IP1=10.10.0.1
IP2=10.10.0.2
IP3=10.10.0.3

HOSTIP=$(hostname -i)
ADMIN_EMAIL=opdk@apigee.com
...
ZK_HOSTS="$IP1 $IP2 $IP3"
ZK_CLIENT_HOSTS="$IP1 $IP2 $IP3"
...
BIND_ON_ALL_INTERFACES="y"
```

#### Updated response file:

```
IP1=10.10.0.1
IP2=10.10.0.2
IP3=10.10.0.3
IP14=10.10.0.14
IP15=10.10.0.15
IP16=10.10.0.16

HOSTIP=$(hostname -i)
ADMIN_EMAIL=opdk@apigee.com
...
ZK_HOSTS="$IP1 $IP2 $IP3 $IP14 $IP15 $IP16:observer"
ZK_CLIENT_HOSTS="$IP1 $IP2 $IP3 $IP14 $IP15 $IP16"
...
BIND_ON_ALL_INTERFACES="y"
```

## Add Zookeeper nodes 2/5

#### 2. Install new Zookeeper nodes

Install new Zookeeper nodes using the updated response file:

/opt/apigee/apigee-setup/bin/setup.sh -p zk -f /tmp/updatedConfigFile.txt

Note: In this video we focus on adding just Zookeeper nodes. A typical Edge installation may add both Cassandra and Zookeeper processes on the same node. If you are installing both new Zookeeper and Cassandra you can use profile ds (Datastore).

## Add Zookeeper nodes 3/5

#### 3. Reconfigure existing Zookeeper nodes

Update Zookeeper local configuration on each of the existing nodes (nodes present on the planet before the addition):

/opt/apigee/apigee-setup/bin/setup.sh -p zk -f updatedConfigFile

## Add Zookeeper nodes 4/5

#### 4. Reconfigure the Management Server

4.1 On a Management-Server node, execute setup.sh to update the Management Server for the newly added Zookeeper nodes:

```
/opt/apigee/apigee-setup/bin/setup.sh -p ms -f
updatedConfigFile
```

4.2 After completing step 4.1, restart all Zookeeper nodes:

/opt/apigee/apigee-service/bin/apigee-service apigee-zookeeper restart

## Add Zookeeper nodes 5/5

#### **5. Reconfigure Edge components**

For each of the components listed, reconfigure the component and restart it:

#### Components list:

- Edge-message-processor (profile mp)
- Edge-qpid-server (profile qs)
- Edge-postgres-server (profile ps)

#### Reconfigure components:

```
/opt/apigee/apigee-setup/bin/setup.sh -p <component> -f updatedConfigFile
```

#### Restart components:

/opt/apigee/apigee-service/bin/apigee-service <component> restart

## apigee

# Removing Zookeeper Nodes

## Removing Zookeeper nodes 1/3

#### 1. Update response file

1.1. Update response file by removing the appropriate Zookeeper nodes.

#### Current response file:

```
IP1=10.10.0.1
IP2=10.10.0.2
IP3=10.10.0.3
IP14=10.10.0.14
IP15=10.10.0.15
IP16=10.10.0.16

HOSTIP=$(hostname -i)
ADMIN_EMAIL=opdk@apigee.com
...
ZK_HOSTS="$IP1 $IP2 $IP3 $IP14 $IP15 $IP16:observer"
ZK_CLIENT_HOSTS="$IP1 $IP2 $IP3 $IP14 $IP15 $IP16"
...
BIND_ON_ALL_INTERFACES="y"
```

#### Updated response file:

```
IP1=10.10.0.1
IP2=10.10.0.2
IP3=10.10.0.3

HOSTIP=$(hostname -i)
ADMIN_EMAIL=opdk@apigee.com
...
ZK_HOSTS="$IP1 $IP2 $IP3"
ZK_CLIENT_HOSTS="$IP1 $IP2 $IP3"
...
BIND_ON_ALL_INTERFACES="y"
```

### Removing Zookeeper nodes 2/3

#### 2. Remove Zookeeper references from Pods and local configuration

2.1. Update configuration of remaining Zookeeper nodes:

```
/opt/apigee/apigee-setup/bin/setup.sh -p zk -f updatedConfigFile
```

2.2. After completing step 2.1, restart all Zookeeper nodes:

```
/opt/apigee/apigee-service/bin/apigee-service apigee-zookeeper restart
```

2.3. Stop all removed Zookeeper nodes:

```
/opt/apigee/apigee-service/bin/apigee-service apigee-zookeeper stop
```

2.4 Uninstall Zookeeper:

If required, uninstall component as described at Uninstalling Edge:

http://docs.apigee.com/private-cloud/latest/uninstalling-edge

## Removing Zookeeper nodes 1/3

#### 3. Reconfigure Edge components

For each of the components listed, reconfigure the component and restart it:

#### Components list:

- edge-management-server
- edge-router
- edge-message-processor
- edge-qpid-server
- edge-postgres-server

#### Reconfigure components:

```
/opt/apigee/apigee-setup/bin/setup.sh -p <component> -f updatedConfigFile
```

#### Restart components:

/opt/apigee/apigee-service/bin/apigee-service <component> restart

# apigee Thank You
