apigee

Rollback

- Uninstall component and apigee-setup
- If rolling back to previous release (optional):
  - Uninstall apigee-setup
  - Bootstrap to previous release
  - Install apigee-setup
- Install and set up older version of component
- Edge components must be rolled back together

Rollback Example

```
/opt/apigee/apigee-service/bin/apigee-service apigee-router stop

/opt/apigee/apigee-service/bin/apigee-service apigee-router uninstall

/opt/apigee/apigee-service/bin/apigee-service apigee-service uninstall

bash /tmp/apigee/bootstrap_<older_version>.sh <args>

/opt/apigee/apigee-service/bin/apigee-service apigee-service install

/opt/apigee/apigee-setup/bin/setup.sh -f /tmp/apigee/response-edge.txt -p r
```

Upgrade Validation

- Run traffic during upgrade
- Monitoring should show a clean system status after the upgrade completes
- Run apigee-all, apigee-version, and apigee-validate
- Execute API tests

Thank You
